Security-first with Hyve's Managed Colocation

Spanning locations across the globe, our colocation service is a cost-effective way to host your compute, storage and network hardware within our highly resilient, state-of-the-art data centres. You'll maintain full control and have hands-on access to your infrastructure, whilst we keep your business-critical data safe.

Our data centres are strategically located in global business hubs, providing the best connectivity, whilst meeting the most stringent regulations in power, cooling and security. Eliminate the cost, hassle and security risks of maintaining hardware in your own facility when you colocate with Hyve.

Your global colocation provider

We are **serious** about **service**.

We **deliver** business **outcomes**.

We are **your cloud experts**.

Why Hyve for managed colocation?

Eliminate the cost, hassle and security risks of maintaining hardware in your own facility when you colocate with Hyve. You'll maintain full control and have hands-on access to your infrastructure, whilst we keep your business-critical data safe in our best-in-class data centres.

All solutions are deployed within our top-tier enhanced data centres across the globe. Our industry-leading global network peers directly with the world's top bandwidth providers, allowing us to guarantee 100% network uptime. Diversely-routed, with no single point of failure, our network provides extremely low latency connectivity on a global scale.

Our experts work with you to identify the most appropriate colocation site that best suits your requirements from our accredited data centres located across the globe.

I could write paragraphs on the excellence of Hyve. Performance is great, with zero down-time in over 2 years. Hyve are brilliant, it is as simple as that.

Features of Hyve's Colocation Services

Industry-leading SLAs

100% network uptime guarantee,
100% power availability guarantee
and 99.99% temperature and humidity
guarantee.

Low latency

Diversely routed, multiple leading band-
width providers, with no single point of
failure, our network provides extremely low
latency connectivity on a global scale.

Cross-connectivity

Benefit from various transport offerings
between our global facilities including
wavelengths, fibre channel and diversely
routed dark fibre network.

Bespoke solutions

From quarter racks to cages and suites,
our flexible colocation offering is
fully bespoke and built to your exact
business requirements.

First-class security

With stringent physical security measures in
place, such as 24/7 CCTV, biometric scanners
and mantraps to prevent unauthorised
access, our data centres are incredibly secure.

Expert support

We deploy colocation solutions in
multiple data centres worldwide, with
centralised management, proactive and
reactive monitoring, remote hands and
24/7 UK phone and ticket support.
