NPS Rating

Optimal performance, reliability and security

Our high-powered, ultra-secure dedicated servers keep your sensitive data locked down, providing your business with the ultimate in security and compliance. Dedicated means it's solely for you – so you won't have to share storage, compute or network resources with anyone else. You get full control of every aspect of your infrastructure, but as always, we're here to support you when you need us.

Enjoy raw power and guaranteed computing performance with our high-availability dedicated server infrastructure, running on HP blades with lightning-fast HP SANs. Security and control are delivered using dedicated hardware solely for your organisation and the latest components from industry leading technology providers such as HP, Juniper and Cisco.

Why Hyve for dedicated server hosting?

As a highly accredited hosting company, you can rest assured that when you choose to host with Hyve, you're in very safe hands. All hosting solutions are deployed within the most reliable data centres which are located across the globe.

The bespoke nature of our architecture allows our experts to design your dedicated server hosting solution to your specific requirements with high performance, reliability and scalability, built-in from the start.

By choosing a dedicated server solution with Hyve, you can concentrate on tasks that provide real business value, while being completely assured that your critical business systems are managed, protected, and monitored by us, 24/7/365.

We are very pleased with the support service provided by Hyve. It's great to get to know the team and feel that we're engaging with real people; there is no faceless corporate service desk with Hyve.

Features of Hyve's Managed Dedicated Server hosting

Global presence

With global locations to choose from you can ensure close proximity to your customers, guaranteeing low latency.

High-availability

All of our cloud platforms can be bespoke architected with high-availability, ensuring that your business is fully resilient and "always-on".

First-class security

Security is the backbone of our business. To protect your business against malicious attacks, we include 1GB of DDoS protection with every plan, at no additional cost.

Extra-mile support

Our UK-based support team are on hand 24/7/365 to support your infrastructure and make complex hosting simple.

Resilient power and cooling

Our data centres all offer multiple layers of redundancy for power and cooling, with a 100% network and power uptime guarantee.

Rapid hardware replacement SLA

With our HPE BladeSystem servers, we can guarantee any faulty hardware will be identified, resolved and fixed within 20 minutes, keeping your business online at all times.
