Future-proof your business infrastructure

Our fully managed private cloud hosting reduces complexity without compromising on security. The bespoke nature of our architecture allows our experts to design your private cloud hosting solution to your specific requirements with high performance, reliability and scalability, built-in from the start.

Powered by VMware, our high availability private cloud is fully secure, resilient and hosted within our compliant data centres. Benefit from the most reliable technology providers, including dedicated HP blades to host VMs and lightning-fast HP 3PAR SANs solely for your organisation.

Why Hyve for managed private cloud?

With separation between the network, computer and storage layers, our private cloud solution is best suited to workloads and data that have demanding compliance, regulatory and data sovereignty requirements.

As a highly accredited cloud company, you can rest assured that when you choose to host with Hyve, you're in very safe hands. All hosting solutions are deployed within our top tier data centres which are located across the globe.

By choosing private cloud hosting with Hyve, you can concentrate on tasks that provide real business value, while being completely assured that your critical business systems are managed, protected, and monitored by us, 24/7/365.

“

Hyve's technical team not only know what they are doing and provide gold-standard support but are proactive to issues you may not have time to spot or recognise.

Features of Hyve's Managed Private Cloud

Global presence

With global locations to choose from you can ensure close proximity to your customers, guaranteeing low latency.

Extra-mile support

Our UK-based support team are on hand 24/7/365 to support your infrastructure and make complex hosting simple.

High availability built-in

All of our cloud platforms are high-availability as standard, ensuring that your business is fully

First-class security

Security is the backbone of our business. To protect your business against malicious attacks, we include 1GB of DDoS protection with every plan, at no additional cost.

Rapid hardware replacement

If you select our recommended HPE BladeSystem servers, we can guarantee any faulty hardware will be identified, resolved and fixed within 20 minutes, keeping your business online at all times.

Resilient power and cooling

Our data centres all offer multiple layers of redundancy for power and cooling, with a 100% network and power uptime guarantee.
